WordCalc Puzzle

Each of the letters in the 10x7 diagram below has a numerical value which you can calculate by adding the number of the row (across) and the column (down) in which the letter is shown. For example, an R is in the 3rd row and the 5th column of the diagram and therefore has a value of 8 (3+5). Other R's may have different values. Each letter may represent a different letter. Each letter in the diagram will be used only once.

Each number chart below the diagram represents a word from the selected category. The numbers are in correct order. You must determine the correct letter for each number. Hint: It is a good idea to try to calculate the letters with the highest and lowest values first because there are not as many combinations of numbers available to make those totals.

	1	2	3	4	5	6	7	8	9	10
1	P	S	K	B	S	A	F		L	R
2	O	A	G	E	B		N	C	S	S
3	E	A	R	I	R	E	T	R	A	E
4	A	L	H	G	O	A	K	S	F	E
5	O	F	I	I	S	S	E	A	O	
6	T	L	E	G	O	N	D	A	N	R
7	T	E	S	I	H	A	N	O	E	L
